

SITEOPS® Design

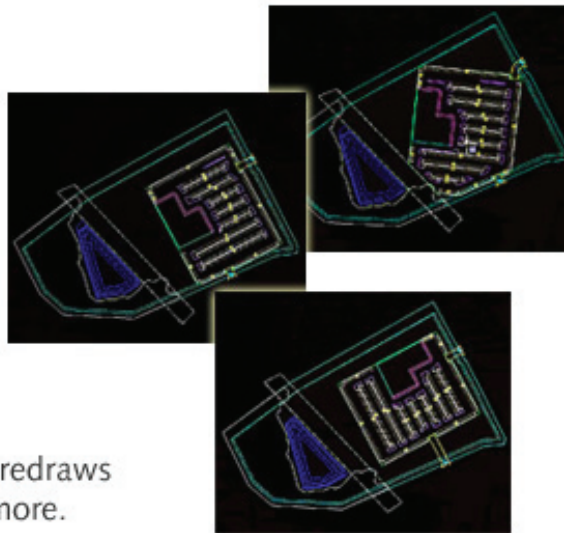

SITEOPS® is revolutionary patented software for land development. Our CAD-compatible web-based systems reduce the time required for conceptual design and rapid prototyping of sites.

Land developers, architects, and civil engineers use SITEOPS Design® for site selection assessments and conceptual layouts, determining whether a building and parking are feasible on a site.

SITEOPS® Design features the powerful drawing tools from full-version SITEOPS, including the ability to auto-generate and count parking spaces. Layout changes are a snap: move a building or a driveway, and watch as the system quickly redraws parking, islands, drives, and more.

What if you could create multiple site layouts in minutes?

From GIS map to conceptual DWGs in a snap...this is no ordinary CAD.

Revisions? No problem.

Our software automatically redraws parking, curbs, drives, and more.

SITEOPS® Design. Harness the power of “what if.”
